

LIFT/LIFT EL.

Transport in a car boot is problem-free by simply taking the wheelchair apart into its modules without using tools.

LIFT manual: With only a little muscle power, the seat is lifted upwards by up to 30 cm. In this position you are eye to eye with a standing person who is about 1.75 m tall.

The LIFT is a revolution in both professional and everyday life: A continuous seat height adjustment instantly opens up new action areas. Flexible options in the most varied of professions and the possibility of using conventional furniture and kitchen furnishings make the LIFT an indispensable support tool. During the day, in the office, you can always get to the folders on the top shelf, and at night the LIFT helps you to enjoy a drink at

the bar, at eye-level with your dialogue partner. As an employee and wheelchair user, you can be assigned flexibly to various different workstations or machines. Wall units and top shelves in the office or at home are accessible, making any conversion work unnecessary.

SIMPLY MORE MOBILITY!

LIFT electrical: The user reaches the desired work height and new action areas at the push of a button.

»ERGO Back backrest with back shell«: Soft rounded transition between the backrest and the back and lordosis support.

LIFT manual

The desired work height is set by means of the user-friendly, manual and continuous adjustment of the seat height, with the help of gas pressure springs. With only a little muscle power, the seat is lifted upwards by up to 30 cm.

LIFT electric

For limited arm or finger function, the same LIFT construction is also available with an electric lift function. The user reaches the desired work height and new action areas at the push of a button.

It is also possible to upgrade the manual LIFT with an electrical seat height adjustment. So if the disability extends it can be altered repeatedly at low-cost.
