About us

Mission

We dream, design and produce mobility aids for everyday life bearing in mind the needs and characteristics of all wheelchair users.

We follow every stage of production with love, care, attention to the smallest detail and by thoroughly testing every single product.

The passion for our work and a strong sense of responsibility both contribute to ensuring the quality and safety of all our products.

For all these reasons Klaxon is the emblem of the **art of moving** all over the world.

Story

The idea of producing mobility solutions for people in wheelchairs was born from the sea.

The previous phrase may seem like a provocation, but realising that it is easier to cross the ocean in a sailing boat than to move around the city, led to the idea of creating “something” that allows people to move around easily and independently on land.

In 2015, Enrico Boaretto and Andrea Stella, the founders of Klaxon, set up a company that designs solutions for the everyday mobility of people who, like them, are wheelchair users.

The choice of the company’s name, however, comes from a completely different world: the road.

In fact “Klaxon”, as well as being a reinterpretation of the name of the car horn, sounds loud and evocative.

The products are called Klick because this word recalls how fast they can be engaged and disengaged: in just a “click”.

Klaxon immediately stood out on the world scene as a highly innovative company, with a creative and cutting-edge R&D department and a worldwide patent for the “**Linking System Klaxon®**”.

Social Responsibility

Klaxon is committed to promote the awareness and knowledge of the **UN Convention on the Rights of Persons with Disabilities** and to support the non-profit activities organised on the world's first fully accessible catamaran "**Lo Spirito di Stella**".

Klaxon is the main sponsor of the "**WoW - Wheels On Waves**" project and it offers, totally free of charge, to persons with disabilities to experience the sea in freedom together with their loved ones, making them feel as they are at home on the boat.

Once ashore they can enjoy an adventurous ride in total autonomy aboard the Klicks provided for them.

«Why in the sea it is so easy to move autonomously while in the city we encounter so many difficulties?»

Andrea Stella

Klaxon is also the main sponsor of the "**WoW for children**" project, dedicated to children with disabilities and their families. An opportunity to live a carefree and joyful day at sea.

Klaxon supports economically and concretely the activities and sport events such as Handbike races, international sailing championships, skiing, paradressage, archery, adaptive surfing, paradance and much more.

Since then Enrico and Andrea have never stopped. Their inquisitive and perfectionist character, supported by a team of engineers and designers, determined the evolution of the models, featuring the best technologies and the most innovative solutions.

Klaxon has achieved ambitious goals that prove its commitment and quality: it has obtained various certifications, including the **ISO 13485**, and worldwide patents that attest to its excellence and quality at an international level.

Klick Power

mod. 2021 KLIICK P-HUB

Powerful, easy to handle, ideal for flat routes

Klick Power is the perfect solution for your urban mobility. In fact, it is always ready to give you all its power when you need it most thanks to its 750W motor.

Intelligent Cruise Control

Thanks to the Intelligent Cruise Control you can set your favourite speed and the Klick will maintain it both uphill and downhill. Perfect for your excursions with friends or for an even more comfortable ride.

EBS - Electronic Brake System

The built-in Electronic Brake System (EBS) allows you to brake electronically using the dedicated brake button or simply by operating the first part of the brake lever. It is always possible to apply the mechanical brake simply by squeezing the lever further. EBS technology will recover energy from braking and use it to automatically recharge part of your battery.

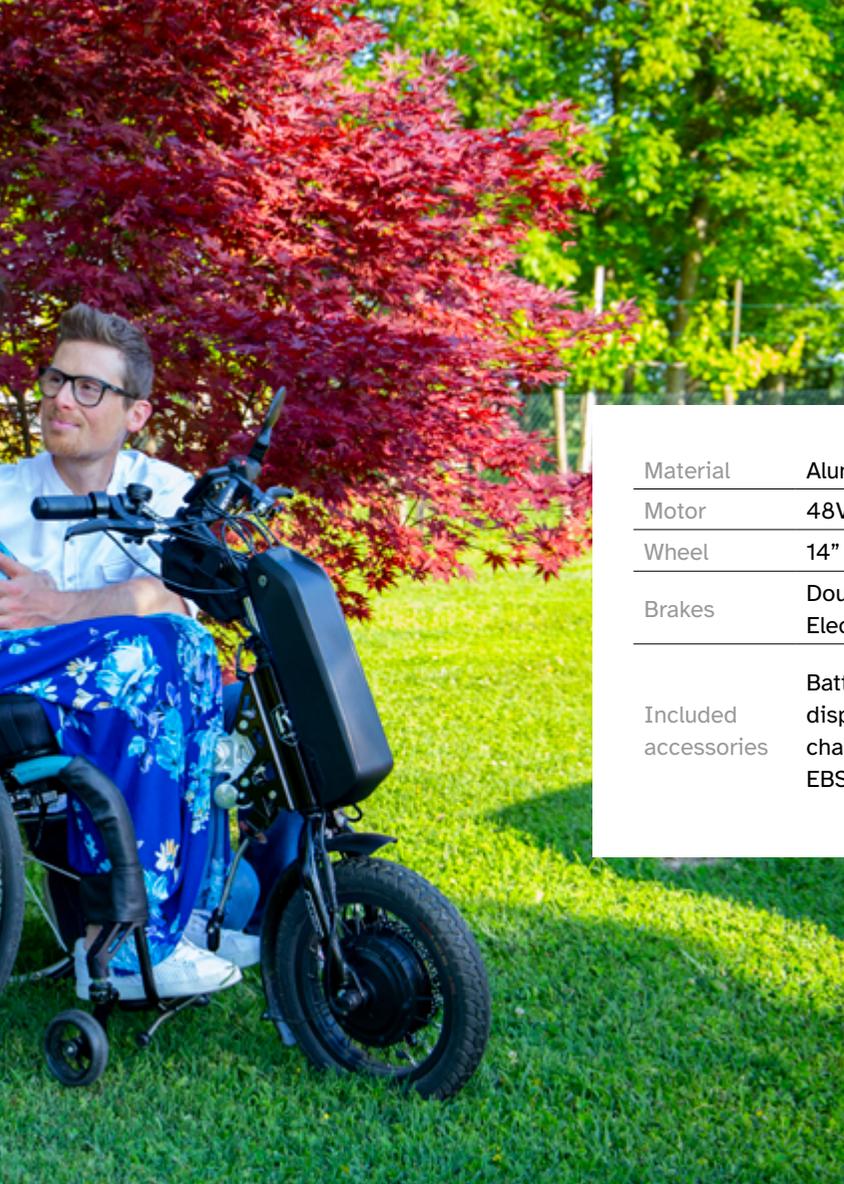

LCD-Display

The new and innovative coloured Klaxon® display is full of new features to customise the performance of your device. Your Klick will be even safer thanks to the anti-theft technology: protected by a unique password provided by Klaxon upon the product's reception!

Handlebars

The **Standard** handlebar is equipped with a parking brake system that keeps the Klick braked when not in motion. The **Tetra** handlebar makes your rides comfortable and easy thanks to the Comfort Drive System. Just pull the handlebars towards you to accelerate and push it forward to brake.

«I've got the power!» - Snap!

Options

Data

Material	Aluminium
Motor	48V x 750W brushless
Wheel	14" smooth tread tyre
Brakes	Double Brake system 160 mm with Electronic Brake System
Included accessories	Battery Charger, Reverse gear, LCD display, bell, USB port for mobile device charging, Foldable kickstand, Splashguard, EBS button, Intelligent Cruise Control

Handlebar	Available options: Standard: Aluminium, adjustable in height, depth and angle Tetra: Aluminium, adjustable in height, depth and angle, Comfort Drive System (accelerator and brake activated through push and pull movement)
	Size With Standard Handlebar: W 50 cm x H 90 cm x D 40 cm With Tetra Handlebar: W 50 cm x H 95 cm x D 40 cm
Weight	With Standard Handlebar: 8,5 kg (battery excluded) With Tetra Handlebar: 9.1 kg (battery excluded)
	Batteries Available options: Race: Lithium 48V x 11.6 Ah, 528 Wh, Weight 3.0 Kg Race Lite: Lithium 48V x 5.8 Ah, 280 Wh, Weight 2.0 Kg Fly Race: Lithium 48V x 2.9 Ah, 140 Wh, Weight 1.0 Kg
Range	Race: about 50 km (at speed level 1 on flat terrain) Race Lite: about 25 km (at speed level 1 on flat terrain) Fly Race: about 12 km (at speed level 1 on flat terrain)
	Connection Available options: Central Linking System Klaxon® Lateral Linking System Klaxon®

Technology

Display	Colour LCD display with automatic night mode
Dedicated Buttons	Intelligent Cruise Control, Electronic Brake System, Reverse gear

Standard Handlebar

Parking brake

To keep the Klick in place when not in motion.

Reverse gear

Reverse gear switch with acoustic signal for a safe reverse manoeuvre.

Intelligent Cruise Control

The cruise control will regulate the speed both uphill and downhill, ensuring a high level of comfort during your rides.

USB port

Your smartphone is out of battery? No problem! Connect your device to the Klick to charge it!

Colour display

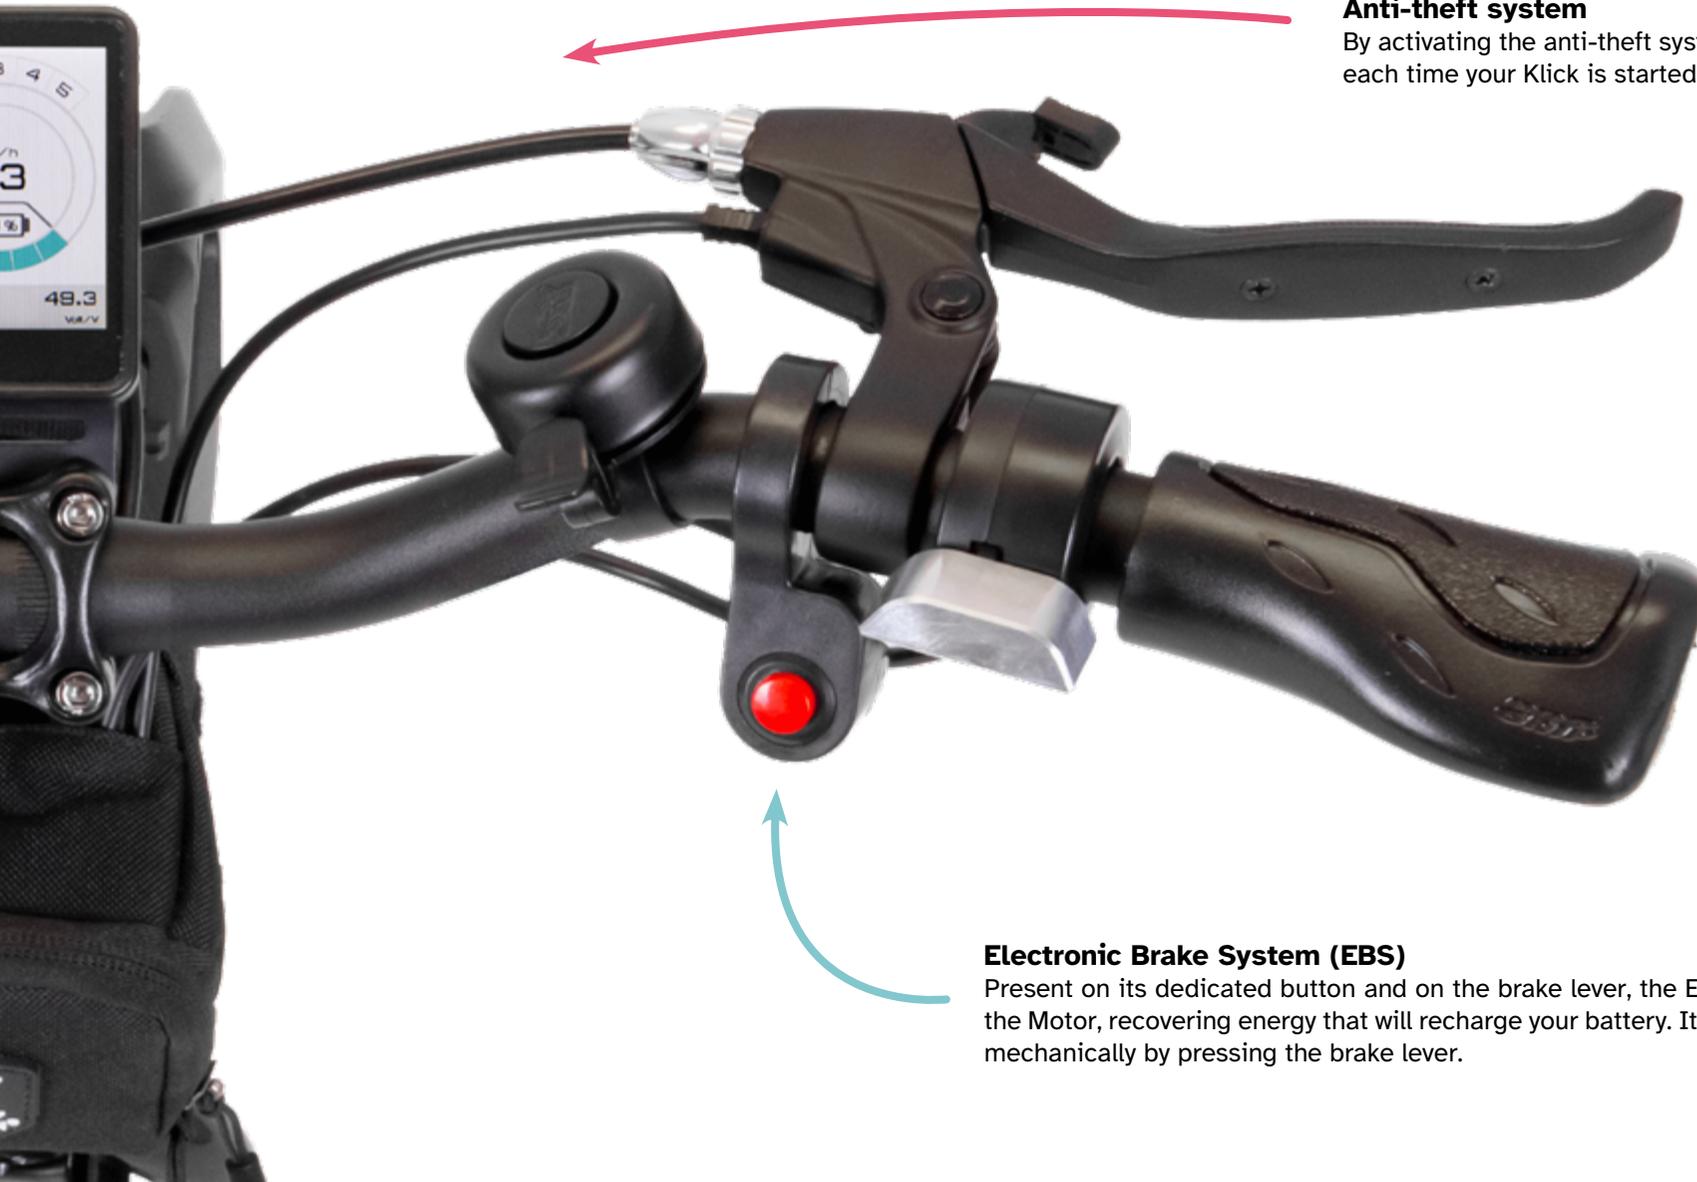

The new colourful display gives you access to performance customisation and provides all the information you need for your adventures. Ideal for those who want to customise every aspect!

Anti-theft system

By activating the anti-theft system an unlock code will be requested each time your Klick is started.

Electronic Brake System (EBS)

Present on its dedicated button and on the brake lever, the EBS will brake using the force of the Motor, recovering energy that will recharge your battery. It will always be possible to brake mechanically by pressing the brake lever.

The art of moving

*«I want to make memories...
... all over the world»*

«It has really changed our lives! It is always with us, even during our travels and holidays!»

Veronica

«Without my Klick everything would have been more difficult!
Thank you Klaxon!»

Marta

«Klick allows you to embrace new horizons, destinations and experiences that you never thought you would have before»

Michele

«In my life I have always chosen the roads less travelled and I continue to do so with my Klick»

Pietro

«So practical and fast to link that it's absolutely incredible! I'm ready to go in just a "Klick"!»

Sarah

«Since I got my Klick my car always is always parked in the garage»
